**NANODISC MEMBRANE SCAFFOLD
PROTEINS (MSPS) MARKET REGIONAL
ANALYSIS, DEMAND ANALYSIS AND
COMPETITIVE OUTLOOK 2025-2032**

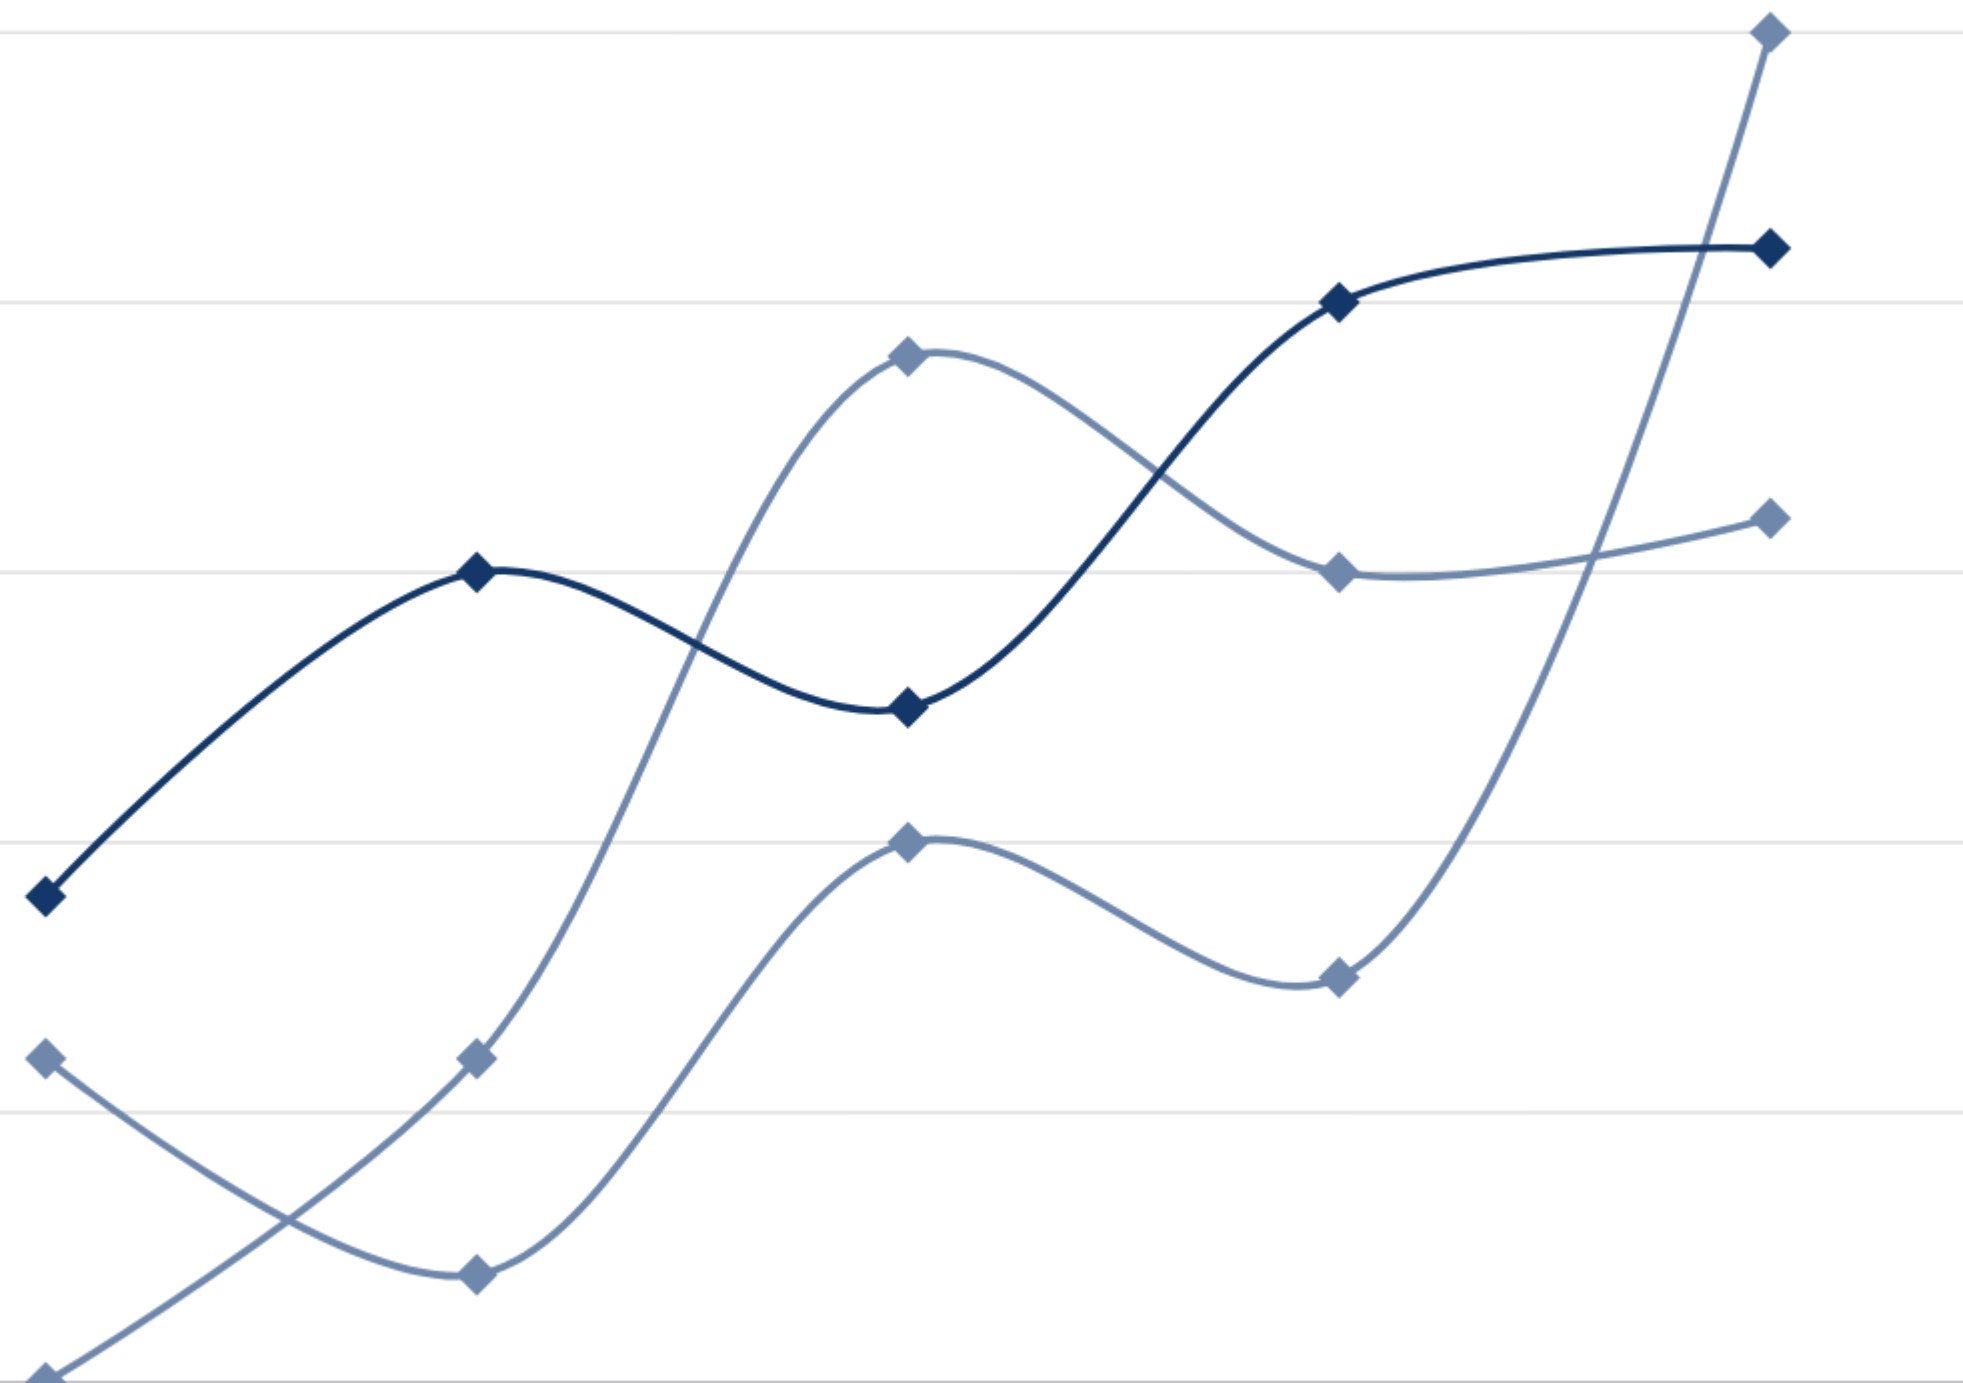

Market Overview

The global Nanodisc Membrane Scaffold Proteins (MSPs) market was valued at USD 202 million in 2024 and is projected to reach USD 303 million by 2031, exhibiting a CAGR of 6.1% during the forecast period.

Membrane scaffold proteins (MSPs) are specialized proteins used to reconstitute isolated membrane proteins within nanodiscs, providing a native-like lipid bilayer environment. These proteins are crucial for structural and functional studies of membrane proteins, including G protein-coupled receptors (GPCRs) and ion channels. The versatility of MSPs allows researchers to study membrane proteins in a stable, soluble form, facilitating applications in drug discovery, structural biology, and biophysical research.

Market size

MARKET INSIGHTS

2024

USD 202 million in 2024

2032

USD 303 million by 2031

CAGR

CAGR of 6.1%

By Type

- **Unlabeled MSPs Segment Dominates the Market Due to Widespread Use in Structural Biology and Protein Reconstitution Studies**
- **The market is segmented based on type into:**
 - **Labeled**
 - **Unlabeled**
 -

By Application

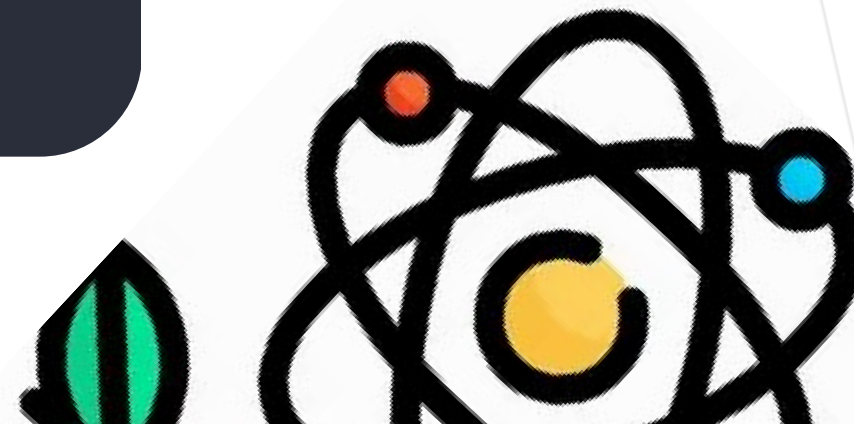

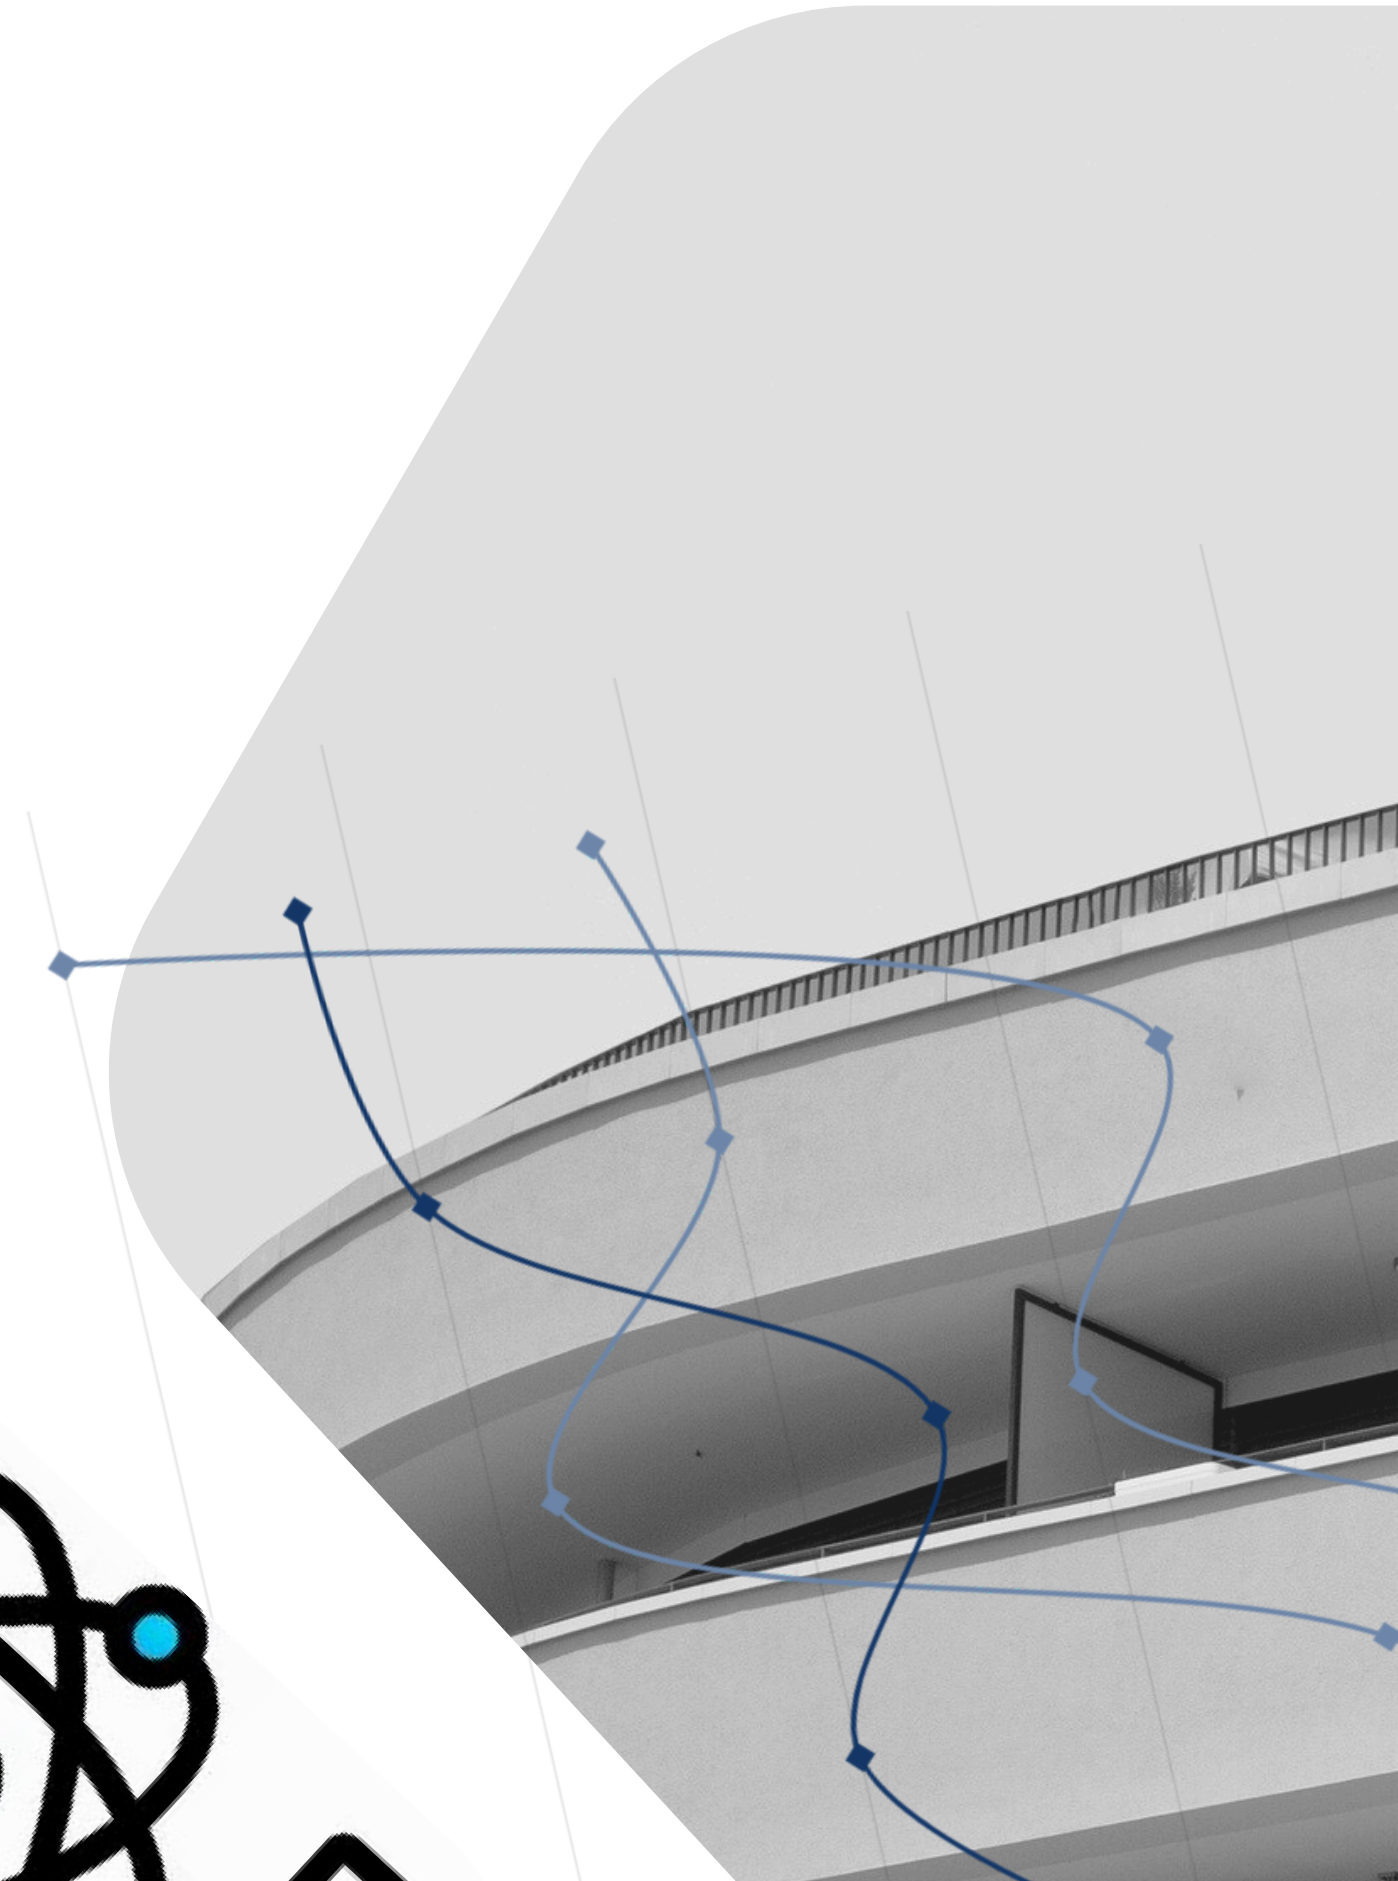

Drug Development and Discovery Segment Leads Due to High Adoption in Biologics Research and Therapeutic Target Identification

The market is segmented based on application into:

- Cancer
- Neurodegenerative Diseases
- Infectious Disease
- Drug development and Discovery
- Others

Our Key Players

- Cube Biotech
- Creative Biostructure
- Merck KGaA
- ACROBiosystems
-
-
