**LIPIDIC CUBIC PHASE CRYSTALLIZATION
SERVICE MARKET REGIONAL ANALYSIS,
DEMAND ANALYSIS AND COMPETITIVE
OUTLOOK 2025-2032**

•

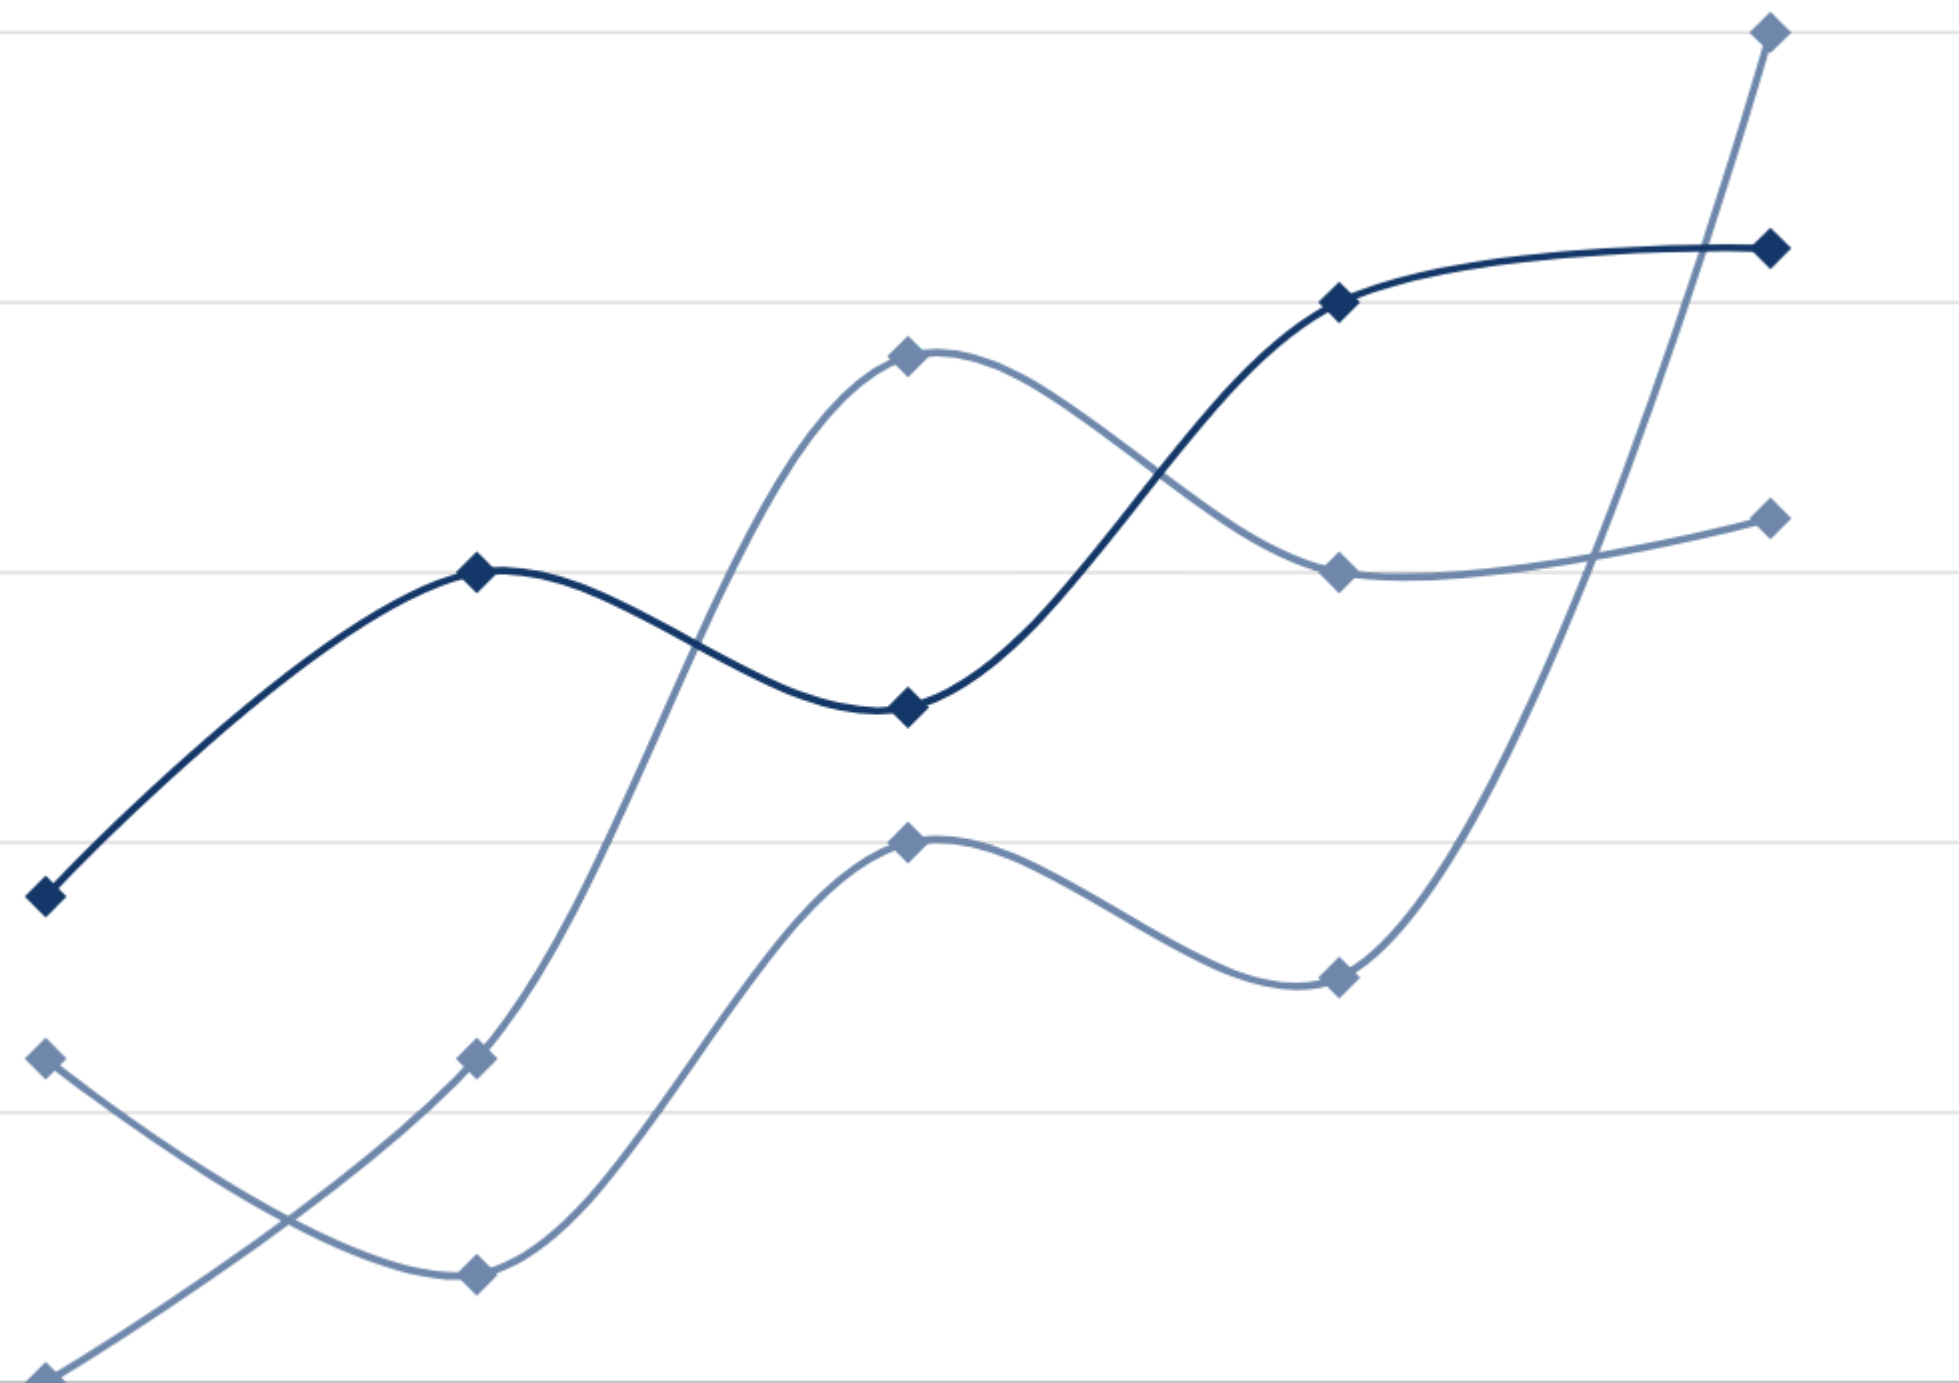

Market Overview

The global lipidic cubic phase crystallization service market was valued at USD 293 million in 2024. The market is projected to grow from USD 315 million in 2025 to USD 463 million by 2031, exhibiting a CAGR of 6.9% during the forecast period.

Lipidic Cubic Phase (LCP) crystallization is an advanced technique used for membrane protein structural analysis, particularly for G-protein coupled receptors (GPCRs). This method creates a stable lipid matrix that mimics the native membrane environment, enabling high-resolution crystal growth. The technique involves mixing aqueous and surfactant components to form a three-dimensional lattice of lipid bilayers and water channels, which facilitates membrane protein crystallization where traditional methods often fail.

Market size

MARKET INSIGHTS

2024

USD 293 million in 2024

2032

USD 463 million by 2031

CAGR

CAGR of 6.9%

By Type

Monolein Segment Dominates the Market Due to its Stability and Versatility in Membrane Protein Studies

1. The market is segmented based on type into:

- **Monolein**
- **Monopalmitolein**
- **Others**
-

By Application

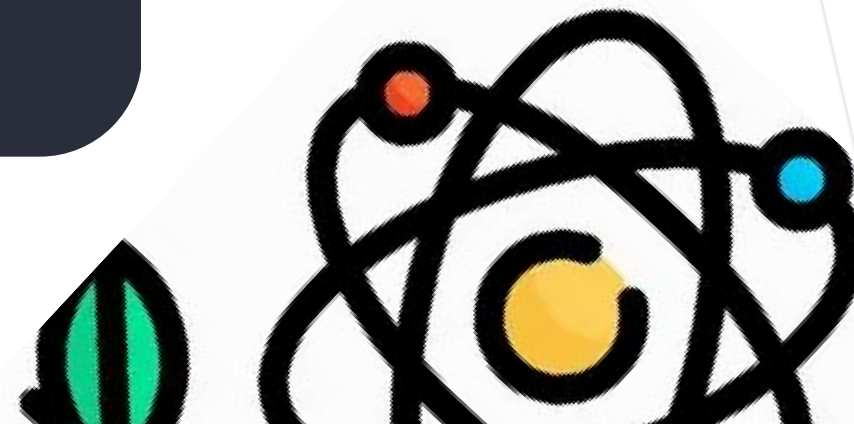

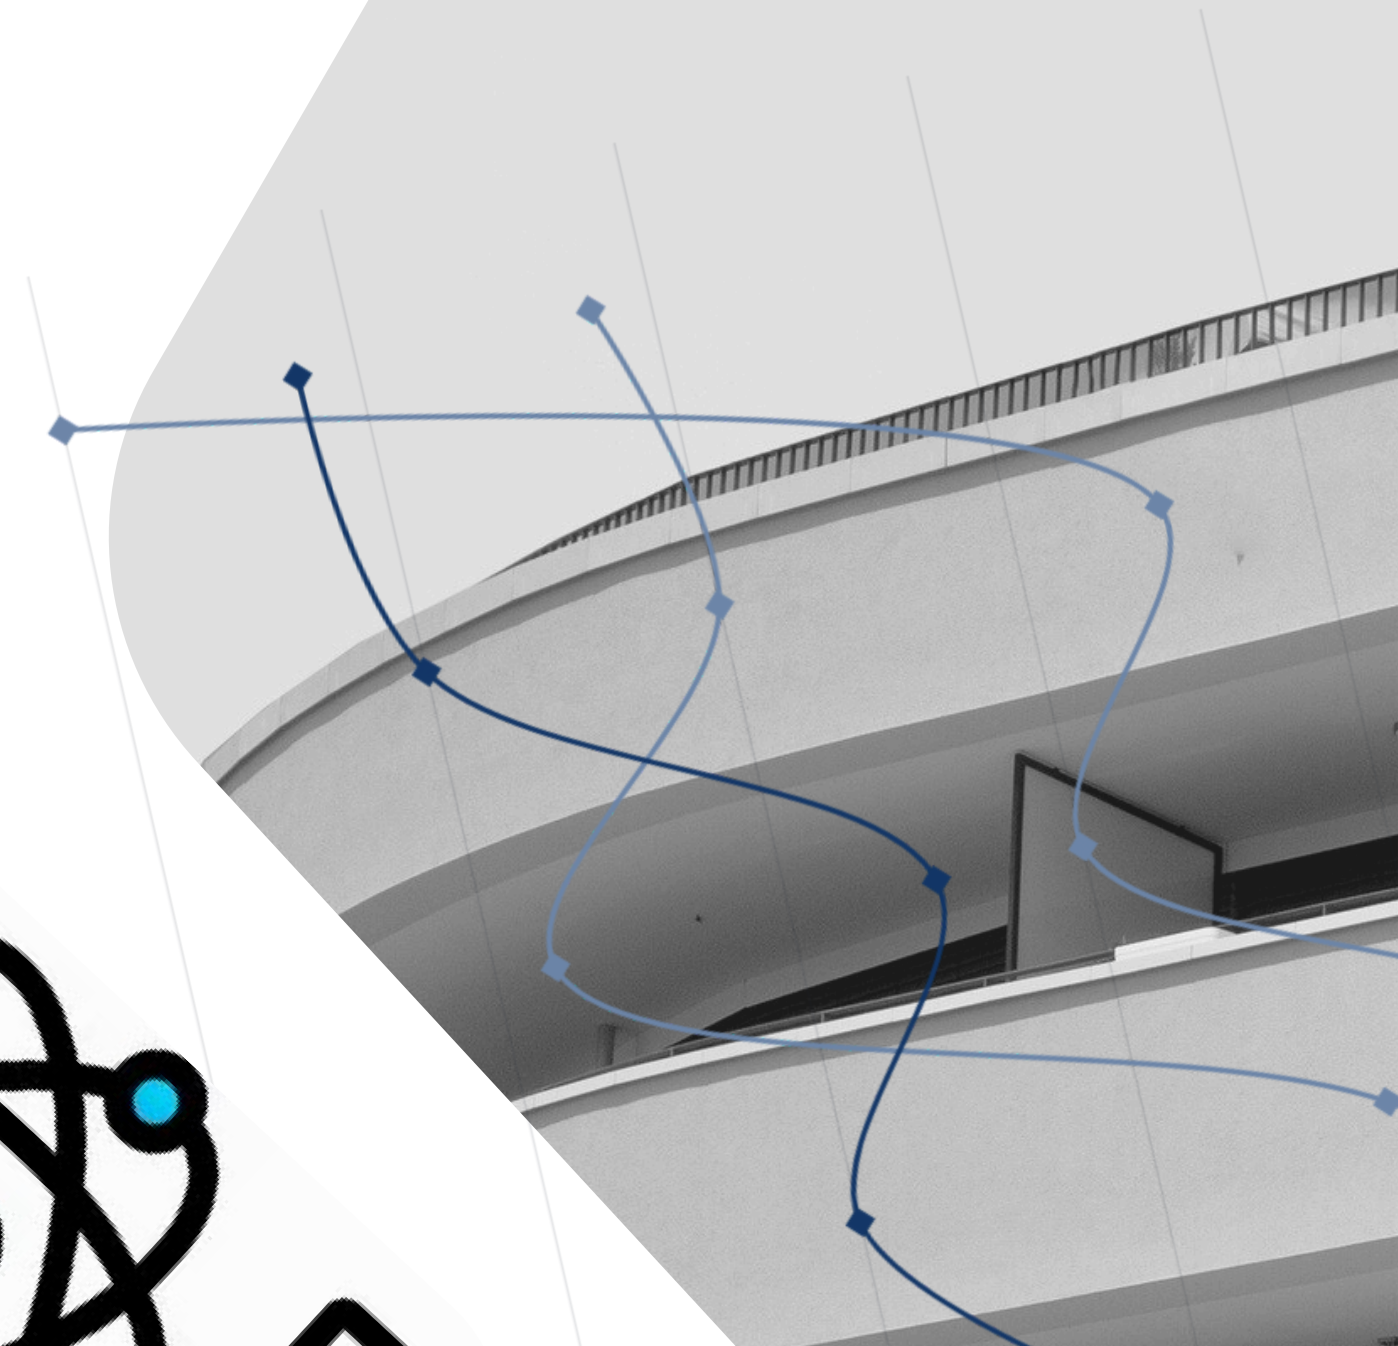

**Pharmaceutical Companies Segment Leads Due to Intense Focus on GPCR
Structure Determination for Drug Design**

The market is segmented based on application into:

- **Pharmaceutical Companies**
- **Academic Research Institutes**
- **Others**

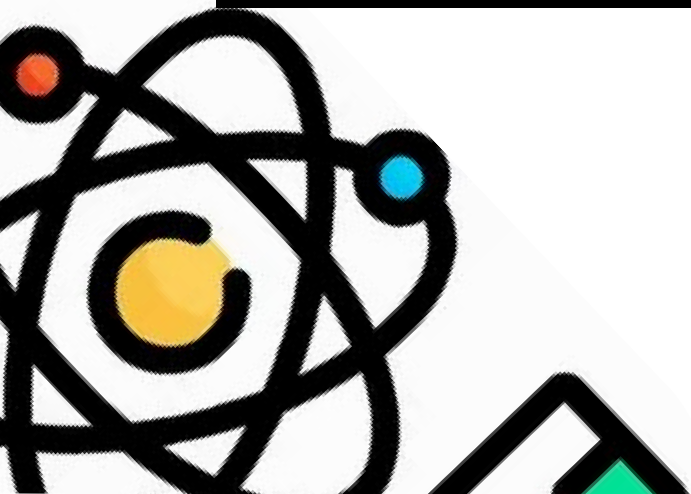

Our Key Players

- Cube Biotech
- Creative Biostructure
- Formulatrix
- Anatrace
-
-
